— Manny's Task 27

Intake → Portal Invite Bridge

■ TO CLAUDE CODE: This file is your full briefing. Read all of it, then greet Manny and walk him through the steps below.

What This Task Does

The /start page lets external clients (developers, architects) submit a conceptual lighting budget request. ILC admins review those submissions at /admin/intake and can approve or reject them.

Right now, after approving a submission, there's no way to get the budget **back to the client**. They submitted, got a confirmation message, and then nothing happens on their end.

This task adds the missing piece: a **"Send Portal Invite"** button in the admin review panel. When clicked, it generates a secure link the admin copies and emails to the submitter. The submitter follows the link, sets a password, and can log into the portal to view their conceptual budget.

Files You'll Touch

File	Change
`src/app/(app)/admin/intake/page.jsx`	Add projects fetch; include duplicateMatch in submissions query
`src/app/api/admin/intake/[id]/route.js`	Accept duplicateMatchId in the PATCH handler
`src/app/api/admin/intake/[id]/invite/route.js`	NEW FILE — creates ProjectExternalContact + generates invite URL
`src/app/(app)/admin/intake/IntakeClient.jsx`	Add Linked Project dropdown + Send Portal Invite button to detail panel

Manny's Steps

1 **Start fresh**

Open a terminal in the project folder. Run:

git pull

git checkout -b manny/intake-portal-invite

Then start the dev server in a separate terminal: npm run dev:3000

2 Give Claude the briefing file

You have two files on your Desktop:

• manny_task27_briefing.md — upload or paste this to Claude

• manny_task27_guide.pdf — this file (for you)

Tell Claude: 'I uploaded the briefing. Please read it and start on Task 27.'

Claude will walk you through each change.

3 Let Claude make the changes

Claude will edit 3 existing files and create 1 new one.

Read each change before saying yes — you're the reviewer.

After all edits, test in the browser:

1. Go to http://localhost:3000/admin/intake
2. Click any APPROVED submission
3. Confirm the 'Portal Access' section appears with a dropdown + button
4. Pick a project, Save, then click 'Send Portal Invite'
5. Confirm the invite URL appears in a copyable field

4 Run verify and push

Tell Claude to run npm run verify and fix anything that fails.

Then: git add + git commit + git push

The pre-push hooks take about 25 seconds. If one fails, fix it — never use --no-verify.

5 Open the PR

Tell Claude to run: gh pr create

Use this title: Task 27: Intake portal invite bridge

Then ping Sean (botheyesshut@gmail.com or Slack) so he can review and merge.

Done When…

Go through this with Claude before opening the PR:

- ■ /admin/intake loads without errors
- ■ PENDING submissions — no 'Portal Access' section visible
- ■ APPROVED submissions — 'Portal Access' section appears
- ■ Picking a project + clicking Save stores the link (page reload confirms it)
- ■ 'Send Portal Invite' button turns amber after project is linked and saved
- ■ Clicking 'Send Portal Invite' shows the invite URL in a copyable field
- ■ Prisma Studio shows a new ProjectExternalContact row with canViewBudgets=true
- ■ Visiting the invite URL (incognito) loads the set-password form — not a 404

- [ ] npm run verify passes all gates
- [ ] PR is open and Sean has been pinged

Rules Claude Must Follow

Rule	Why
No schema changes	*All the fields we need already exist. If Claude suggests editing prisma/schema.prisma, stop it.*
force-dynamic on every page	*Every page under src/app/(app)/ needs 'export const dynamic = force-dynamic' at the top.*
force-dynamic on new API routes	*New route files need it too.*
Never --no-verify	*If a pre-push hook fails, fix the underlying issue.*
Don't touch calculations.js	*The budget engine is off-limits unless a task explicitly says otherwise.*

Questions? Ping Sean (botheyesshut@gmail.com). Branch: manny/intake-portal-invite | Estimated time: ~3 hours | Generated 2026-08-04
