ILC Lighting App

Bug Sweep + UX Improvement List for Manny -- August 2026

2	2	8	18	15
CRITICAL BUGS	HIGH BUGS	MED / LOW BUGS	XS UX WINS	S UX ITEMS

This list is the output of a full bug sweep and UX audit run on 2026-08-12. Start from the top -- critical bugs first. The UX improvements are ordered by effort: XS items take under 30 minutes each, S items 1-2 hours, M items a half-day, L items a full day (flag those to Sean before starting). Everything marked "verify with Sean" means pause and check before committing.

Your current active task (Task 27: portal invite bridge) stays top priority. Start these only after Task 27 is merged. Suggested order: fix BUG-01 and BUG-02 first (both are 5-minute fixes that unblock the intake admin panel), then work through the XS UX wins to ship a batch of improvements quickly.

CRITICAL BUGS -- Fix These First

BUG-01 CRITICAL — CO PDF Route: Auth Completely Bypassed

File: `src/app/api/projects/[id]/change-orders/[coId]/pdf/route.js -- line 17`

What: Line 17 is: const { error } = await requireAuth().catch(() => ({ error: null })); Two problems: (1) requireAuth() is called without passing the request object, so it cannot read the session cookie. (2) even if it could, the error result is never checked -- there is no "if (error) return ..." anywhere in the function. Any unauthenticated HTTP request can download any CO PDF by guessing project and CO IDs.

Fix: Replace line 17 with: const { user, error } = await requireAuth(req); Then add on the very next line: if (error) return new Response("Unauthorized", { status: 401 }); Note: the function signature is GET(req, { params }) -- "req" is already the first param, just not being passed through.

BUG-02 CRITICAL — Admin Intake Save Always Returns 500

File: `src/app/api/admin/intake/[id]/route.js -- line 28`

What: Line 28 is: reviewedAt: new Date() -- but reviewedAt does not exist in the ConceptualSubmission migration (0053_conceptual_submission/migration.sql) or schema.prisma. Prisma rejects the unknown field at runtime. Every click of Save in the admin intake review panel returns a 500. Approvals, rejections, and review notes cannot be saved.

Fix: Delete line 28 entirely. The record already has updatedAt (managed automatically by Prisma) which serves the same purpose. No schema change needed -- just remove the one line.

HIGH BUGS

BUG-03	HIGH	CLIENT_VIEWER Can Write and Delete Projects

File: `src/app/api/projects/[id]/route.js -- line 34 (PATCH), 157 (DELETE)`

What: Both the PATCH and DELETE handlers check only whether createdById === user.id, not whether the user role is CLIENT_VIEWER. A CLIENT_VIEWER who created a project can edit any project field (name, phase, contractValue, salesOwnerId, etc.) and permanently delete the project and all cascading data via direct API calls.

Fix: At the top of the PATCH handler (before any field updates) and at the top of the DELETE handler, add: if (user.role === "CLIENT_VIEWER") return NextResponse.json({ error: "Forbidden" }, { status: 403 }); The isClientViewer() helper in src/lib/auth.js can be imported and used instead of a raw string check.

Note: Confirm with Sean that CLIENT_VIEWER should be fully read-only. If so, also check the POST /api/projects route (BUG-06 below).

BUG-04	HIGH	SUPER_ADMIN Locked Out of ~30 Project Sub-Routes

File: `src/app/api/projects/[id]/ (many files) -- line various`

What: About 30 project sub-routes (activity, budget, chat, contacts, files, fixture-schedule, meeting-notes, peer-review, tracker, etc.) have local "canAccess" checks that allow role === "ILC_ADMIN" but not role === "SUPER_ADMIN". A SUPER_ADMIN who did not personally create a project gets a 404 on all of these routes.

Fix: In each affected route, replace the local role === "ILC_ADMIN" check with the isSuperAdmin(role) helper imported from src/lib/auth.js, which correctly matches both ILC_ADMIN and SUPER_ADMIN.

Note: This touches many files. Show Sean the list of affected routes before starting -- he may want to batch this into a single PR or handle it differently.

MEDIUM / LOW BUGS

BUG-05	MEDIUM	Dashboard Engine Uses Deprecated pipelineProbability

File: `src/lib/dashboardEngine.js -- line 242`

What: Line 242: probability: p.pipelineProbability reads the old single-field value. The app has migrated to probabilityToWin + probabilityToMoveForward, averaged via averageProbability() in pipeline.js. Dashboard widgets using this engine show stale numbers that disagree with the CRM pipeline cards.

Fix: Import averageProbability from src/lib/pipeline.js and replace line 242 with: probability: averageProbability(p)

Note: Check with Sean that dashboardEngine.js is not in Mike's active work area before touching.

BUG-06	MEDIUM	CLIENT_VIEWER Can Create Projects (POST Has No Role Block)

File: `src/app/api/projects/route.js -- line 31`

What: The POST /api/projects handler calls requireAuth but adds no CLIENT_VIEWER block. Any authenticated CLIENT_VIEWER can create new projects, which contradicts the role description.

Fix: After the requireAuth check, add: if (isClientViewer(user.role)) return NextResponse.json({ error: "Forbidden" }, { status: 403 }); Import isClientViewer from src/lib/auth.js.

Note: Pair this fix with BUG-03 in the same PR.

BUG-07	MEDIUM	emailDomains Not Parsed Before Domain Matching (Latent)

File: `src/lib/intake.js (caller sites) -- line 105`

What: Client.emailDomains is stored as a JSON string in the DB ("[\"example.com\"]"). resolveClientByDomain checks Array.isArray(c.emailDomains) which is always false for DB-fetched clients. Domain matching always returns "none" regardless of what is in the field. Currently latent -- the function is not yet called with live DB clients -- but will break immediately when intake domain-resolution is wired up.

Fix: In the API route that calls resolveClientByDomain, parse emailDomains before passing: clients.map(c => ({ ...c, emailDomains: JSON.parse(c.emailDomains || "[]") }))

BUG-08	MEDIUM	viewLog JSON.parse Has No try/catch in Share Routes

File: `src/app/api/share/[token]/route.js and src/app/api/share/standards/[token]/route.js -- line 14 (both files)`

What: JSON.parse(share.viewLog || "[]") is called without a try/catch. A corrupted viewLog value in the DB throws an unhandled SyntaxError and returns a 500, which breaks portal PDF download logging for that shared link.

Fix: Wrap in try/catch: try { log = JSON.parse(share.viewLog || "[]"); } catch { log = []; }

BUG-09	LOW	Clients Stats "Developers" and "Architects" Always Show 0

File: `src/app/(app)/clients/ClientsClient.jsx -- line 201-202`

What: The stats widgets filter on c.type === "Developer" and c.type === "Architect" (titlecase) but the DB stores lowercase values ("developer", "architect"). Both counts are always 0 regardless of how many clients of each type exist.

Fix: Change both comparisons to lowercase: c.type === "developer" and c.type === "architect".

BUG-10	LOW	Portal "Back to Projects" Link Uses Wrong Href

File: `src/app/portal/projects/[id]/page.jsx -- line 999`

What: The back-navigation link href is "/portal" instead of "/portal/projects". /portal redirects somewhere, but the intent is the projects list page.

Fix: Change href="/portal" to href="/portal/projects".

BUG-11	LOW	Portal Mobile Nav Silently Clips 7th Section

File: `src/app/portal/projects/[id]/page.jsx -- line 1026`

What: available.slice(0, 6) hard-limits the mobile bottom nav to 6 tabs. A project with all 7 sections enabled silently drops the last one with no indicator it exists.

Fix: Change to available.slice(0, 7), or add a "More" overflow item that opens a drawer for the remainder.

BUG-12	LOW	Stale "Not Wired Yet" Comment in Public Intake Form

File: `src/app/start/IntakeClient.jsx -- line 9-11`

What: A comment block says "Submission is NOT wired yet" but the submit button is active and fully wired to POST /api/intake/submit.

Fix: Delete the comment block.

BUG-13	LOW	Admin Intake Close Button Does Not Reset Form State

File: `src/app/(app)/admin/intake/IntakeClient.jsx -- line close button handler`

What: Clicking Close calls setSelectedId(null) but does not reset status, reviewNote, or clientId. Stale values persist in state until the next row is clicked, which could cause a flash of stale data if the component re-renders.

Fix: In the close handler, also call: setStatus(""); setReviewNote(""); setClientId(""); and any other form-field state variables added by Task 27.

UX QUICK WINS -- XS (under 30 minutes each)

ID	Item	File	What to do	Effort
UX-01	**Intake queue empty state**	`admin/intake/IntakeClient.jsx`	When submissions.length === 0, show a centered message instead of ghost column headers: "No submissions yet. Share the /start link to receive requests." with a copy-link button.	**XS**
UX-02	**CRM kanban empty-column message**	`crm/CRMClient.jsx`	Empty kanban columns show only the + New Project ghost button with no text. Add "No projects at this stage" above it.	**XS**
UX-03	**Dashboard client name -> link**	`dashboard/DashboardClient.jsx`	Wrap the Client column value in <Link href={"/clients/" + project.client.id}>. Staff can jump to client detail without leaving the dashboard.	**XS**
UX-04	**Dashboard relative timestamps**	`dashboard/DashboardClient.jsx`	Change the Updated column from toLocaleDateString() to relative time ("3 days ago", "just now"). Show absolute date in a title attribute on hover. No library needed -- a simple helper function works.	**XS**
UX-05	**Intake email -> mailto link**	`admin/intake/IntakeClient.jsx`	Render submitterEmail as <a href={"mailto:" + s.submitterEmail}>. Staff who want to reply currently must copy-paste.	**XS**
UX-06	**New project: add budget type field**	`project/new/NewProjectForm.jsx`	The form accepts initialBudgetType but never renders a field for it. Add a <select> using the BUDGET_TYPES constant already defined in the file. Peer Review / Bid projects are currently fixed after creation.	**XS**
UX-07	**Pricing editor "last saved at" stamp**	`admin/pricing/PricingEditor.jsx`	After a successful save, store Date.now() in savedAt state and show "Last saved at 2:34 PM" in the sticky header next to the Saved checkmark. Resets to null when fields are edited.	**XS**
UX-08	**Admin user table search box**	`admin/AdminClient.jsx`	Add a text input above the users table that filters rows by name or email client-side. 50+ users makes scanning impractical without search.	**XS**
UX-09	**Project breadcrumb: client name -> link**	`project/[id]/ProjectHubClient.jsx`	The middle breadcrumb segment "Client Name" is a plain . Change to <Link href={"/clients/" + project.client.id}>.	**XS**
UX-10	**Admin sub-pages: add back breadcrumb**	`admin/intake/IntakeClient.jsx, admin/pricing/PricingEditor.jsx`	/admin/intake and /admin/pricing have no breadcrumb or back link. Staff must use the browser back button. Add a small "- Admin" link at the top of each.	**XS**
UX-11	**Admin projects rows -> linked to projects**	`admin/AdminClient.jsx`	The All Projects tab shows name/owner/status but clicking a row does nothing. Make the project name a <Link href={"/project/" + p.id}>.	**XS**
UX-12	**Phase/service selects: disable during save**	`project/[id]/ProjectHubClient.jsx`	Phase and service-type dropdowns show "Saving..." text but the <select> stays enabled. A fast user can queue a second change. Add disabled={savingPhase} and disabled={savingSvc} to each select.	**XS**

ID	Item	File	What to do	Effort
UX-13	**Client card delete: add loading state**	`clients/ClientsClient.jsx`	deleteClient fires fetch() then refresh() with no visual feedback. Track deletingId state, disable the card buttons during the request.	XS
UX-14	**Notification dry-run banner: make dismissable**	`components/notifications/NotificationSettingsTab.jsx`	The "Email is in dry-run mode" amber banner appears every time the tab opens with no way to dismiss it. Add an X button that stores a dismissed flag in localStorage.	XS
UX-15	**Portal project cards: use Link not button**	`portal/projects/page.jsx`	Each project card is a <button onClick={() => router.push(...)}>. Change to <Link href={"/portal/projects/" + p.projectId}>. Clients can then right-click, middle-click, and see URLs in the status bar.	XS
UX-16	**Portal budget tab: add "as of" date**	`portal/projects/[id]/page.jsx`	The bid matrix shows no timestamp. Add "Pricing as of MM/DD/YYYY" (using the matrix updatedAt) above the Download button. Clients reviewing quotes need to know if numbers are current.	XS
UX-17	**Portal meeting notes: replace symbol expand text**	`portal/projects/[id]/page.jsx`	The expand toggle uses the string literals "More v" and "Less ^". Replace with a chevron SVG icon that rotates 180deg on expand, matching the pattern used throughout the rest of the app.	XS
UX-18	**Portal sidebar: add ILC Studios branding**	`portal/projects/[id]/page.jsx`	The desktop sidebar header shows only the project name. External clients have no visual confirmation they are in an ILC-operated system. Add the ILC amber logo mark and "ILC Studios" at the top of the sidebar.	XS

UX SMALL -- S (1 - 2 hours each)

ID	Item	File	What to do	Effort
UX-19	**Intake save: replace full-page reload**	`admin/intake/IntakeClient.jsx`	handleSave calls window.location.reload() on success. Replace with router.refresh() and update the submissions array optimistically -- flip the changed submission's fields in local state so the selected row stays visible and scroll position is preserved.	S
UX-20	**Dashboard delete/duplicate: loading + double-click guard**	`dashboard/DashboardClient.jsx`	Action buttons have no loading state and accept double-clicks. Add a per-row actionRow state, disable both buttons while a request is in flight, and show a small spinner in the icon slot.	S
UX-21	**Admin: persist active tab in URL**	`admin/AdminClient.jsx`	Tab state is in useState -- refreshing or sharing /admin always lands on Users. Use useSearchParams + router.replace to sync tab state to ?tab=users|create|projects, matching the pattern ProjectHubClient already uses.	S
UX-22	**Budget wizard: add back link to project hub**	`project/[id]/WizardClient.jsx`	The wizard has no breadcrumb or back link. Add "- Back to {project.name}" at the top of the wizard layout so staff are not stranded.	S

ID	Item	File	What to do	Effort
UX-23	**Intake table: click-to-sort columns**	`admin/intake/IntakeClient.jsx`	Add sortable column headers (Submitted, Name, Status) using the same SortIcon + toggleSort pattern already used in DashboardClient. Submitted descending should be the default.	S
UX-24	**Intake queue: status filter tabs**	`admin/intake/IntakeClient.jsx`	Add a tab strip or dropdown (All / Pending / Approved / Rejected) above the table that filters submissions client-side. The only current way to find pending items is visual scan.	S
UX-25	**Pricing editor: unsaved-changes guard**	`admin/pricing/PricingEditor.jsx`	Changes are silently discarded on navigation. Add a sticky amber "You have unsaved changes" banner that appears when saved === false and any field has been edited. Also wire window.addEventListener("beforeunload") to warn before closing the tab.	S
UX-26	**Pricing editor: collapsible section groups**	`admin/pricing/PricingEditor.jsx`	All ~60 pricing fields are always visible. Group them into collapsible accordion panels (open by default). Use the same useState(collapsed) + onClick toggle pattern from NotificationSettingsTab's ModuleSection.	S
UX-27	**Portal: first-visit welcome banner**	`portal/projects/page.jsx`	After accepting an invite, clients land on the projects list with no explanation of what each section means. Add a dismissable welcome card ("Welcome to your ILC project portal -- here's what you'll find...") that disappears on click and stores dismissed in localStorage.	S
UX-28	**Portal: show ILC rep contact info**	`portal/projects/[id]/page.jsx + API`	Every empty-state message says "Contact your ILC project manager" but gives no name or email. Pass the primary assignee's name and email from the project API response and show it in the portal sidebar footer.	S
UX-29	**Project hub: budget total in header**	`project/[id]/ProjectHubClient.jsx`	The budget total is visible only inside the Budgets tab. Add a small budget pill (e.g., "$1.2M Conceptual") in the project header next to the phase badge so it's visible on every tab.	S
UX-30	**New project: "set up budget" nudge**	`project/[id]/ProjectHubClient.jsx`	After creating a project, there is no contextual "next step" prompt. Add a one-time banner on the project hub for projects with no budget data yet: "Your project is ready -- open the Budgets tab to get started." Dismiss via localStorage.	S

UX MEDIUM (M) and LARGE (L) -- Flag L items to Sean first

ID	Item	File	What to do	Effort
UX-31	**Clients: table view toggle**	`clients/ClientsClient.jsx`	With 20+ clients the card grid requires scrolling to find a specific name. Add a Board/List toggle (same pattern as CRM) with a table view: Name, Type, Location, Project Count, Notes.	M

ID	Item	File	What to do	Effort
UX-32	**Admin: Create User as modal, not tab**	`admin/AdminClient.jsx`	Switching to the "+ Create User" tab navigates away from the user list, losing scroll and search state. Refactor CreateUserForm into a modal (same pattern as ClientsClient) triggered by a button on the Users tab.	**M**
UX-33	**CRM summary bar: per-owner row**	`crm/CRMClient.jsx`	The pipeline summary aggregates all owners. Add a compact "By Owner" breakdown row below the main stats bar (visible only when unfiltered) showing each rep's open pipeline and win rate at a glance.	**M**
UX-34	**Portal: forgot-password flow**	`portal/login/page.jsx` (new `/portal/reset-password` page)	Clients who forget their password have no self-service option. Add a "Forgot password?" link on the portal login that accepts an email and sends a reset token using the same invite-token mechanism. CONFIRM WITH SEAN before starting -- involves auth system.	**L**
UX-35	**Admin: copyable temp password in success banner**	`admin/AdminClient.jsx`	After creating a user, the temp password is shown nowhere. Mike must communicate it out-of-band. Add a "Copy temp password" button in the creation success banner. Pass the password back via the onCreated callback.	**L**

REMINDER: always branch first (git checkout -b manny/...), never use --no-verify on git push, and ping Sean for PR review. BUG-01 and BUG-02 can be a single small PR. Group related UX fixes into logical PRs (e.g. all XS intake fixes together). Never touch src/lib/calculations.js.
